- Developed a Quality Assurance Web Portal using Java, HTML, CSS nas Javascript to be used by the Test and Version Control Team in over 30 affiliates.
- Pioneered the use of Gitlab by providing a 2 hour tutorial to team members.

PROJECTS

Image classifier: This was a class project in my Computer Vision class where we used technologies like numpy, tensorFlow and pytorch to create a Convolution Neural Network that classifies images from the cifar 10 dataset with a 97% accuracy.

Itunes Song Finder: This is a web app that provides a list of 15 song snippets from the itunes API given an artist that the user enters. The front-end was built from scratch using HTML, CSS, and JQuery. The web app also serves as a music player for the songs received and has functionalities like shuffle, repeat, etc.

Dinner Suggestions Chatbot: This is a chatbot built with Amazon Lex that communicates with the user in order to take dining requests and returns back a list of restaurants by using the Yelp API. The backend calls AWS DynamoDB and AWS Elastic Search to retrieve quick suggestion based on the dining locations and cuisines requested.

TECHNICAL SKILLS

Languages: Python, Java, Javascript, HTML, CSS

Frameworks: Flask, Node.js, Tensorflow, ScikitLearn, Keras, JQuery, Socket.io, P5.js

Databases: MongoDB, MySQL, Cloud databases (AWS, Firebase), Redis.js
